

**The contractor I want to hire,
the contractor I want to be**

sometimes contracting is the best!

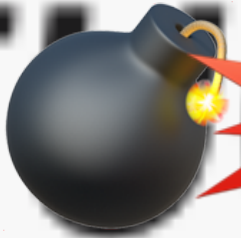

iftheshoefritz 8:41 AM

I'm not normally a swearsy person but

iftheshoefritz 8:41 AM

I'm not normally a swearsy person but

F    **yeah!!**   

sometimes contracting is the worst

The. Worst.

- Frightened contractors
- ... working *really* hard
- ... without the skills they need
- ... getting no useful feedback
- ... building things that no-one understands
- ... that break on Tuesdays
- ... and get thrown away

**hopefully this talk create more of the
best 🙌**

Glossary

Glossary

- contractors: charge per hour/day, temporarily
- internal/full-time employees: paid a salary, until notice

Glossary

- client: people hiring contractors
- agency:
 - "rents out" staff at contracting rates
 - pays full-time salaries
 - may work inside client
 - may own a project alone

Glossary

- consultants: subset of contractors
 - title used to raise expectations
 - hired for a specific result
 - hazards and remedies still apply

Diagrams

- contractors are **ORANGE**
- in-house, full-time employees are **BLUE**

Story time

**Names have
been changed**

Fred

Fred's boss just received an email

"We know that you charge outstanding [expensive] rates ... previously that has been ok because you provided us with outstanding developers"

"In fact, one of your developers on our team,
Jesse, is outstanding."

"Fred is not outstanding. In fact, he seems to be less than half as productive as Jesse."

"We will end our contract with you in two weeks'
time."

Oof.
The. Worst.

Frida

**Frida just got an endorsement on
LinkedIn**

"Frida's addition to the team lead to an instant increase in transparency"

"constant pairing with the development team helped to sustainably increase the team's velocity"

"... willingness to understand the product ... on a technical but also on a business level."

"This helped not only to bridge the gap between product and business but also lead to better product decisions"

That feels *good*

What went wrong for Fred?

**Contractors have different
challenges and opportunities**

5 differences between full time and contract software work

Difference #1: risk and high stakes

More money than capacity

this year

next year

Temporary capacity increase

this year

next year

Rapid offboarding

this year

next year

Someone is still paying salaries

- low risk for client
- contractor takes risk of quick exit

Economics reality check

- contractors charge 3x-5x full time salary
- expect to not be billing all the time
 - leave, sickness etc
 - clients end the contract
 - clients stop existing

Frida

Increased cost raises the stakes

Increased cost raises the stakes

- results now, not later
- comparison with full-time salaries

Difference #2: *variety* and learning

2021

2023

Client 1

Client 2

Client 3

Client 4

Client 2

Year 1

Year 10

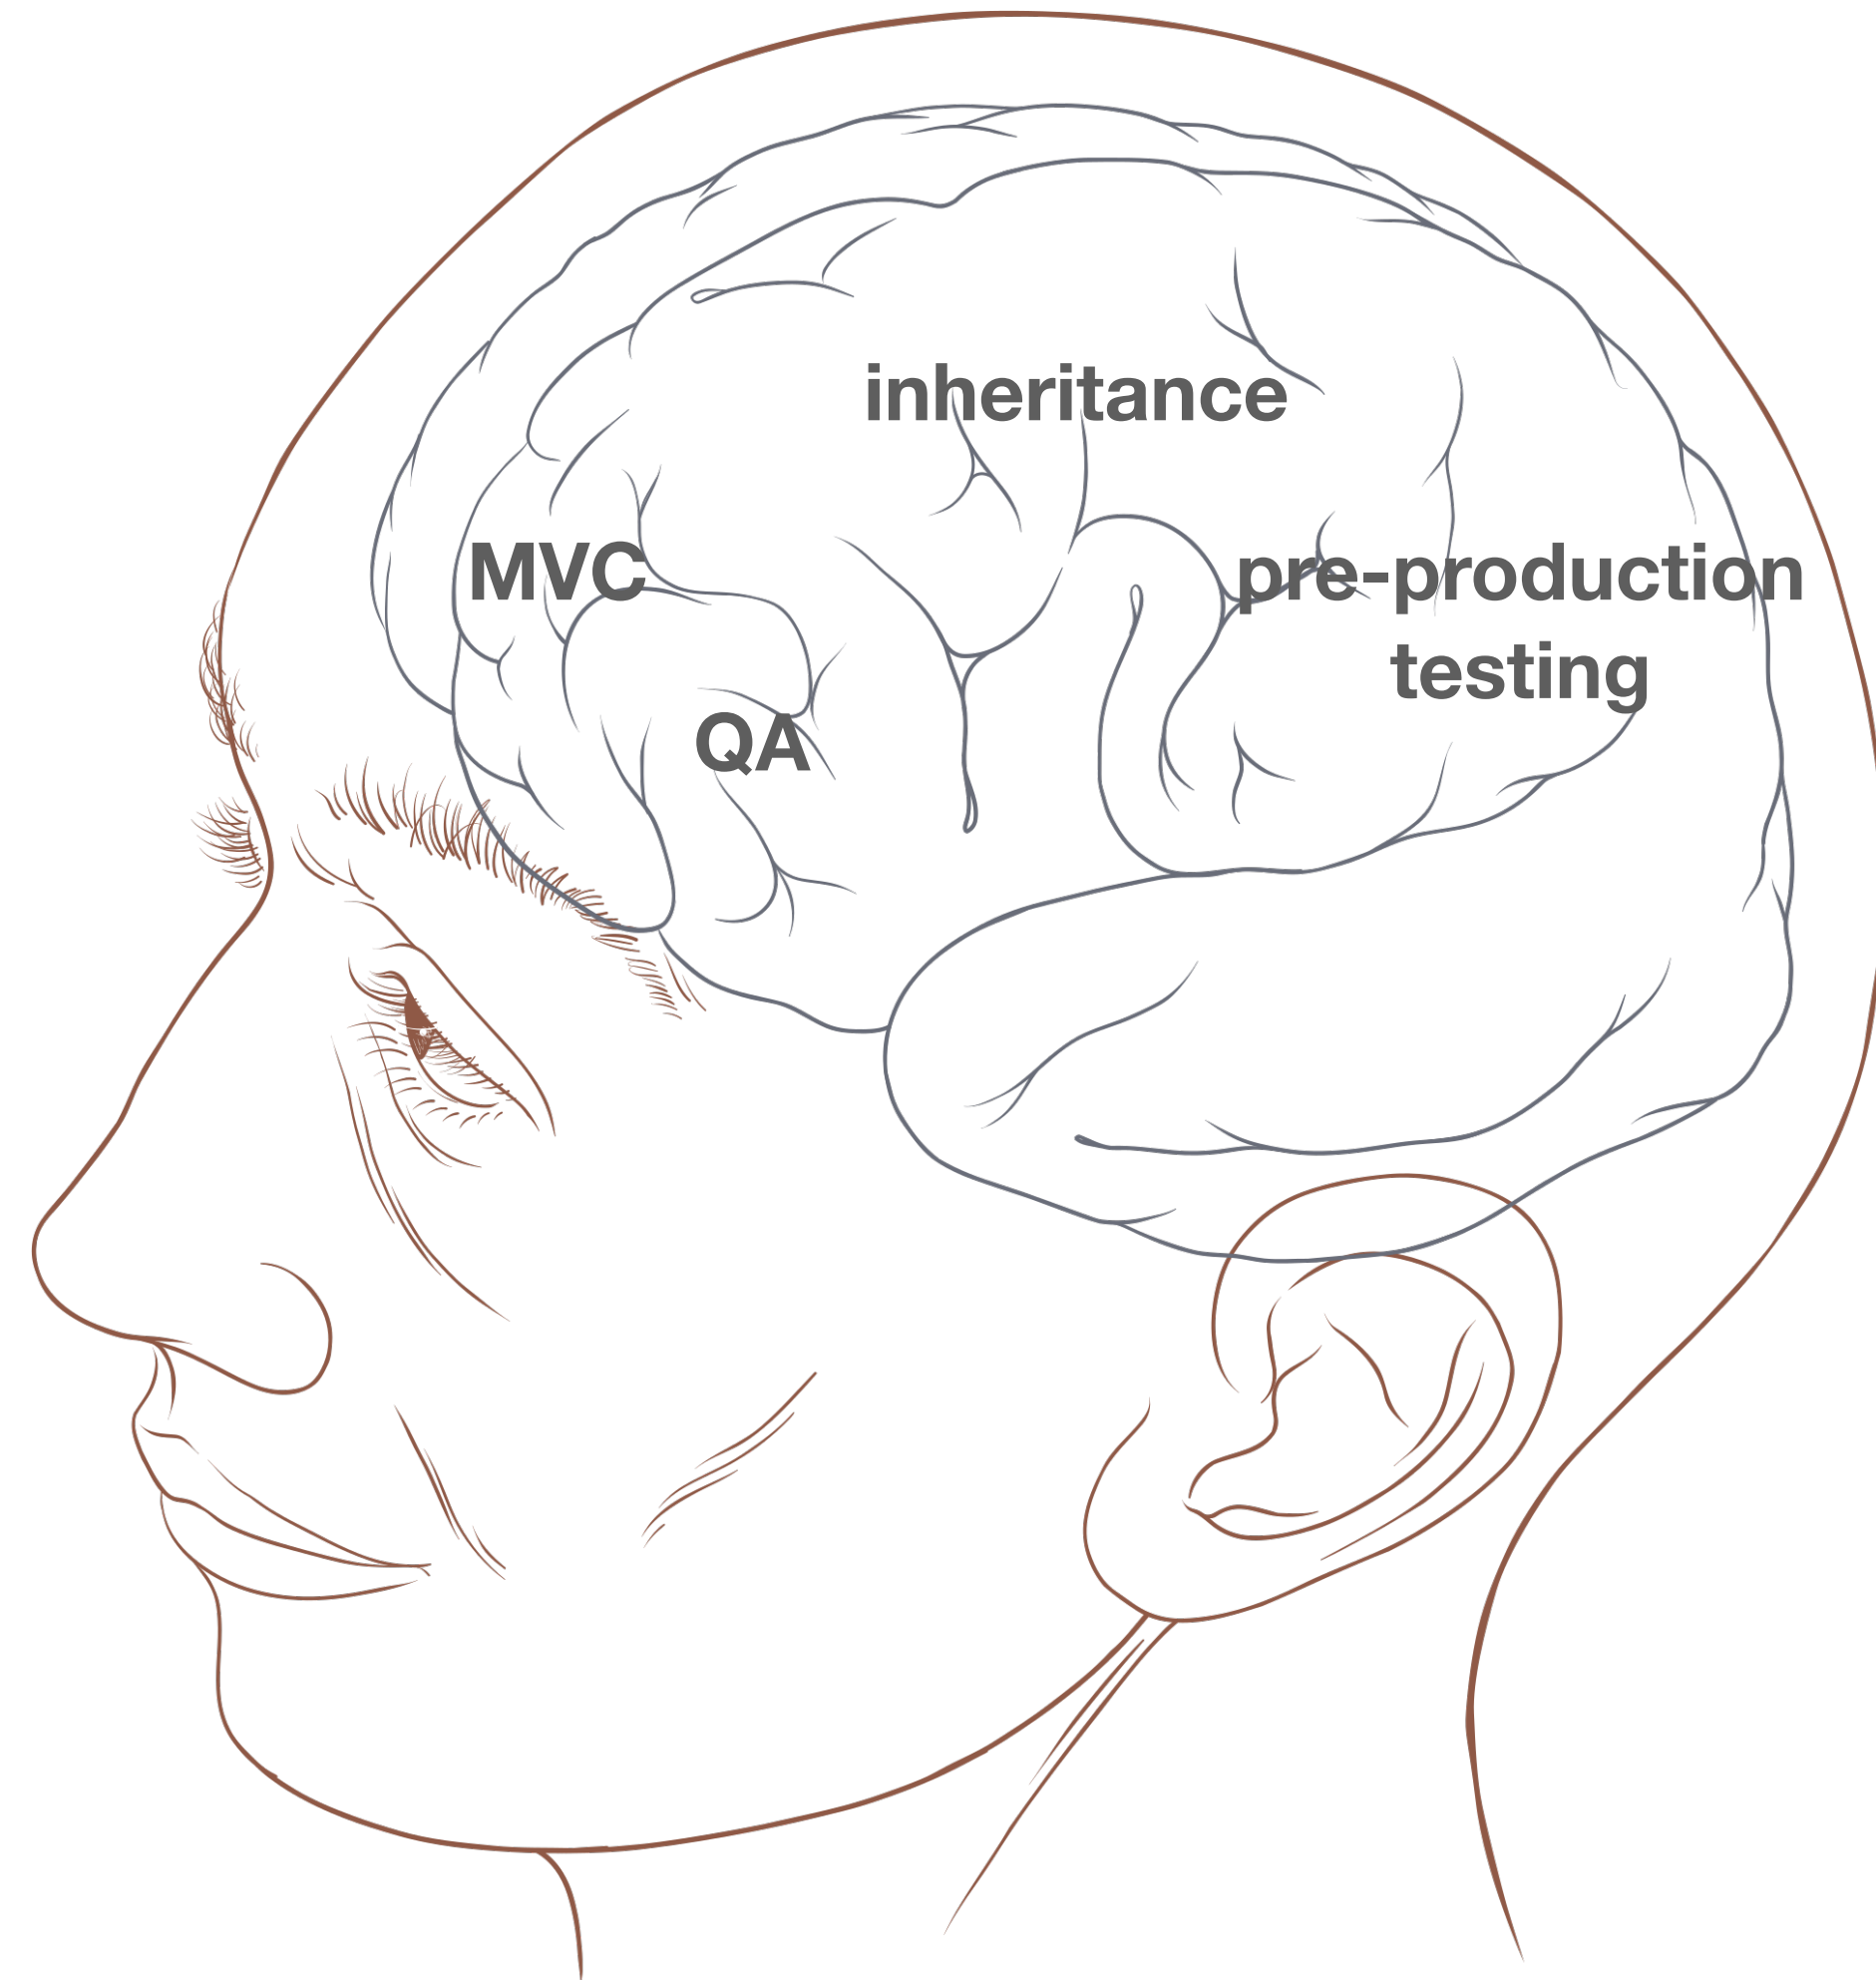

1	2	3	4	3	2	5	6	7	8	9	5	10	11	12
---	---	---	---	---	---	---	---	---	---	---	---	----	----	----

Frida

Year 1

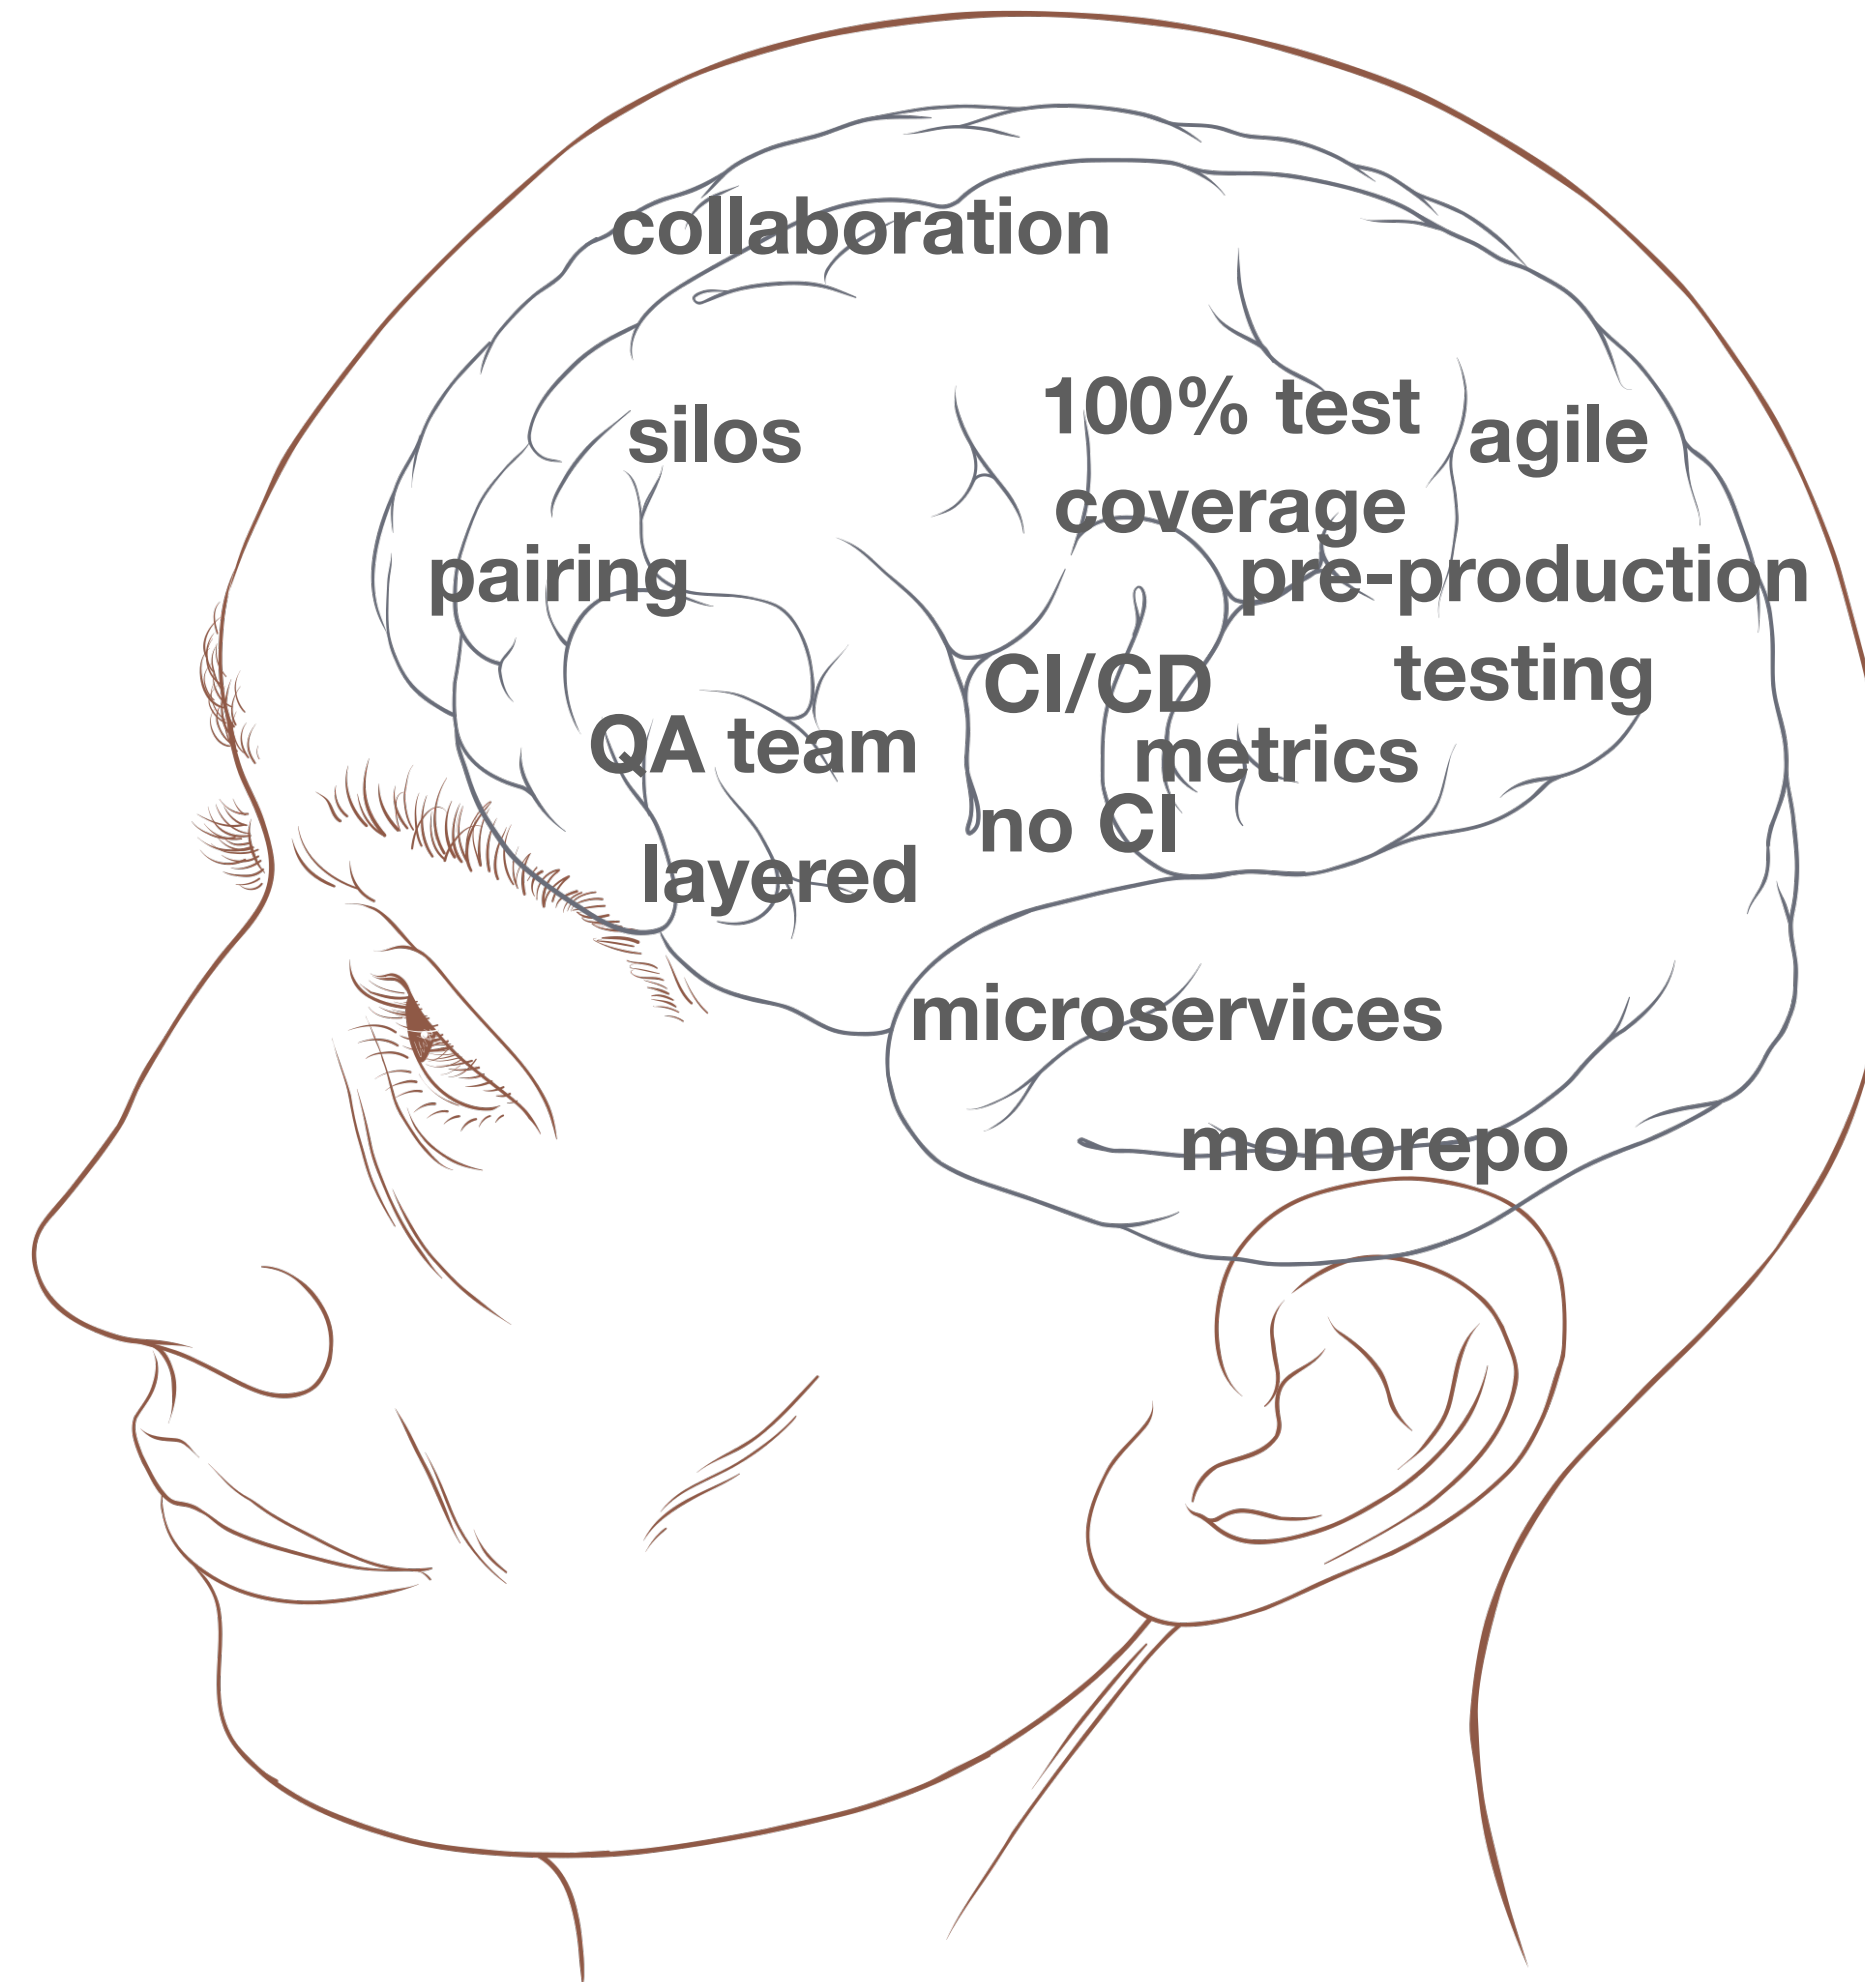

Year 10

**Moving around can increase knowledge,
but doesn't guarantee it**

Difference #3: fresh perspectives

Fred

Confusion?

I guess that's what we do here

Frida

Something's off

Have you thought of this?

**New people ask obvious questions.
Sometimes no-one has thought of them.**

Difference #4: potential isolation

Software delivery requires connection

Building the right software

- is difficult
- the starting plan is usually wrong
- requires many questions
 - and cross-referencing with other people's answers

... and fast!

- cut out the low priority items
- don't build things that already exist
- don't try to manually perform a process that is already automated
- requires more questions

Success needs

- understanding the existing landscape
- how do the existing code and systems work?
- how does the internal team work?

Contractors are at a disadvantage

Fred

Got a job to do, keep going

... in the wrong direction

Frida

self-examines

... and can reposition herself

**If we feel isolated, we don't trust that we
can safely ask for input**

**contractors start out isolated and need to
work to get to square one**

Difference #5: disempowerment

Disempowered

Disempowered

Frida

Self-empowers

Fred

Didn't notice

Thanks Fred, thanks Frida!

Investing for contracting success

Three investors: clients, contractors, agencies

Clients can invest

Techniques for empowerment and connection

- onboarding
 - have the contractors improve the onboarding
- documentation
- technology tricks
 - automating infrastructure
 - self-documenting code

Be realistic about investment

- onboarding
- documentation
- technology tricks
 - automating infrastructure
 - self-documenting code

Be realistic about investment

- onboarding
- documentation
- technology tricks
 - ~~automating infrastructure~~ maybe PAAS?
 - self-documenting code

Evergreen soft skills for software teams

- collaboration
- speed up feedback cycles

Contractors can invest

Learn to play before joining the band

https://www.reddit.com/r/photoshopbattles/comments/9k7e9z/psbattle_this_guy_playing_the_trumpet_backwards/

Being ready for the band

- read a book
- take a course
 - bonus points: do this with someone else, at human hours
- open source
- try being a top 10 contributor to a topic on StackOverflow for a month

Learning on the job

- pairing
- pay attention in team conversations
 - pick something you didn't understand and revisit later
- draw diagrams

expect to start small

Reflection for growth

- what makes a good product?
- what does a software team need?
- what caused things to go wrong on previous projects?
- what helped on previous projects when things went wrong?

Don't sit in silence

Breaking silence as a habit

- retrospectives
- **blameless** or **blame-aware** post mortems
- **conversations**

Agencies can invest

Agencies

- create variety, don't keep people stuck
- create teams with diverse strengths, not teams that reinforce weakness
- offer support, not scrutiny and pressure
- see learning as essential, not as awkward overhead

Clients: please quiz your agency

Not just about cost

Agency talk: spotting the nonsense

- "our team members are the best so nothing ever goes wrong!"
- "but if it does go wrong we'll work harder to fix it no matter what!"

Agency talk you can trust

- "we expect our team members to identify, communicate and mitigate risks so that surprises are not disastrous"
- "it's important that we all ask what has gone wrong and fix the underlying cause so that we don't repeat those mistakes"
- "all plans go wrong sometimes, but we're good at identifying the work that delivers the biggest bang for buck and will help to understand how to maximise the remaining time"

Questions to ask an agency

- "what do you need from us to ensure success?"
- "how does your agency support your team members?"
- "how do you handle rotations?"
- "when and how do your team members practice their craft and learn?"
- "when do your team members do agency management and admin?"

Revisiting Fred and Frida

be kind to Fred

kindness != enabling

help Fred be more like Frida

Freds turn into Fridas

Fred = Frida = Me!
